

React Notes

1. Introduction to React

- React is a JavaScript library for building user interfaces.
- Component-based, declarative, and efficient.

2. JSX and Components

- JSX: Syntax extension to write HTML in JS.
- Components: Functional and Class-based.

3. Props and State

- Props are read-only inputs to components.
- State stores local component data.

4. Hooks

- useState, useEffect are common hooks.
- Hooks replace lifecycle methods in functional components.

5. Routing and Context

- React Router for navigation.
- Context API for global state management.
